POTTING SOIL TECHNICAL SPECIFICATION

Our potting soil is an excellent blend of Organic decomposed material with essential nutrients for plants. Guaranteed in controlled production according to international standards. Free from pest and weeds.

Usage:

- Indoor & Outdoor Plants.
- Growing Vegetables, Flowers and Herbs.
- Soilless cultivation and hydroponic systems.
- Perfect growing medium for Plants.
- High water and nutrition holding capacity.
- Optimum plant growth. The Potting mix can be used for greenhouses and open cultivation.

SPECIFICATION OF VERMI

OUR PRODUCTS SOLID ORGANIC FERTILIZERS SPECIFICATIONS & PRICE

1.ORGANIC FERTILIZER (High Quality) / Vermi Compost Compostion MANURE:

Particle Size	: 90% Passes through 4mm I.S Sieve
Colour	: Brown to Black
Smell	: Odorless
P.H	: 6.5 to 7.5
Moisture	: 10 - 15%
Bulk Density	: Less than 0.9 gm/cc
Nitrogen	: Min. 1.0%
Phosphorous	: Min.0.8%
Potassium	: Min.0.8%
Organic Carbon	: Min.17%
Packing	: 40/50 kgs in HDPE Bag
Shelf life	: Use within 1 year from manufacturing date

Toxicity symbol : Green

ORGANIC FERTILIZER (VERMI COMPOST composition) / Manure is manufactured from the **bufflow dung & plant biomass used** by **BIO –TECHNOLOGY** and **SCIENTIFIC COMPOSTING**. Our Product increase crop Production and yield, improves soil health, fertility, structure, creates favorable conditions for healthier plant growth & development and reduce the usage of chemical fertilizers and water. It provides humus, organic matter, micro organisms, major nutrients like Nitrogen, Phosphorous, Potassium, Manganese, Calcium, Magnesium etc., Micro nutrients like Boron, Zinc, Molybdenum, Iron etc..

Used For

- Agriculture
- Gardening: Vegetable, Roof top, herbal
- Organic Landscaping
- Fruit trees (Horticulture)
- Flowering Plants (Floriculture)
- Natural Lawn and Garden care
- Tissue culture Plants
- Aquaculture

SPECIFICATION OF VERMI

3. PHOSPHATE RICH ORGANIC MANURE (PROM):

Particle Size: 90% material passes through 4mm I.S Sieve
PH (1:5 SOLUTION) max.: 6.7
Moisture : Max. 25%
Bulk Density : Less than 1.6 gm/cc
Total Nitrogen (as N) by Wt.: Min. 0.4%
Total Phosphate (as P₂O₅) by Wt.: Min. 8.0%
Total Organic Carbon : Min. 10.0%
C: N ratio : <20:1
Conductivity (as dSm-1) : <10.0
Packing : **50 kgs** in HDPE Bag
Shelf life : Use within 1 year from manufacturing date

Toxicity symbol : Green

PHOSPHATE RICH ORGANIC MANURE (PROM) is a DAP substitute which improves the soil texture by increasing the organic carbon, phosphate content of soil. Fertility of the soil depends upon the quantity of beneficial micro organisms in the soil. "PROM" contains organic matters and cultures which is the food and energy for logarithmic growth of the micro organism. With regular use of "PROM", micro organism flora increases. pH, EC and nutrient status of the soil improves. Soil becomes more fertile.

For production of "PROM", the basic raw materials used are Organic Manure and mineral Rock Phosphate.

ORGANIC MANURE is manufactured from the buffalo dung only (Not from PRESS MUD, MUNICIPAL WASTE etc.) & plant biomass used by BIO-TECHNOLOGY and SCIENTIFIC COMPOSTING. This Organic Manure is enriched with ROCK PHOSPHATE and made as PHOSPHATE RICH ORGANIC MANURE (PROM).

Other Benefits of PROM:

- Slow release of Phosphate which is already fixed in soil.
- Silica is one of the important nutrients required by the many crops. Availability of Silica helps to increase the disease and pest resistant power of the crop. "PROM" contains about 4% to 6% Silica in available form.
- For production of "PROM", the basic raw material used is mineral Rock Phosphate. Phosphate in rock phosphate is in the form of molecules of calcium and phosphate. "PROM" contains about 6% to 8% available calcium along with phosphate. Calcium is the basic requirement of the crop.
- "PROM" as an alternative to DAP. It also contains Nitrogen fixing culture, which minimizes the requirement of the Nitrogen of the crop.

SPECIFICATION OF VERMI

2.ORGANIC FERTILIZER (Medium Quality) / MANURE:

Particle Size: 90% Passes through 4mm I.S Sieve
Colour : Brown to Black
Smell : Odorless
P.H : 6.5 to 7.5
Moisture : 15 - 25%
Bulk Density: Less than 1.0 gm/cc
Nitrogen : Min. 0.5%
Phosphorous: Min.0.5%
Potassium : Min.0.5%
Organic Carbon: Min.14%
Packing : 40/50 kgs in HDPE Bag
Shelf life: Use within 1 year from manufacturing date

Toxicity symbol: Green

ORGANIC FERTILIZER / MANURE is manufactured from the Plant Biomass / animal Biomass/ animal excreta used by **BIO -TECHNOLOGY** and **SCIENTIFIC COMPOSTING**. Our Product increase crop Production and yield, improves soil health, fertility, structure, creates favorable conditions for healthier plant growth & development and reduce the usage of chemical fertilizers and water. It provides humus, organic matter, micro organisms, major nutrients like Nitrogen, Phosphorous, Potassium, Manganese, Calcium, Magnesium etc., Micro nutrients like Boron, Zinc, Molybdenum, Iron etc..

Our Organic Manure is **ENRICHED** with **NITROGEN FIXING BACTERIA (N.F.B)**, **PHOSPHOROUS SOLUBLISING BACTERIA (P.S.B)**, **POTASSIUM SOLUBILISING BACTERIA (KSB)**, **VAM**, **NEEM**, **TECHOTHERMA**, **PSUDOMONAS** , **ROCK PHOSPHATE** etc.

Used For

- Agriculture
- Gardening: Vegetable, Roof top, herbal
- Organic Landscaping
- Fruit trees (Horticulture)
- Flowering Plants (Floriculture)
- Natural Lawn and Garden care
- Tissue culture Plants
